**FAIRBANKS SCALES TO SHOWCASE WEIGHING INNOVATIONS
AT FARM PROGRESS SHOW 2021**

See the latest breakthroughs in vehicle weighing technology at booth # 540

Overland Park, KS – [Fairbanks Scales Inc.](#), the oldest scale company in the U.S. and the world's leader in weighing equipment, announces they will be showcasing several state-of-the-art industrial scales at the Farm Progress Show, August 31 – September 2, 2021, in Decatur, Iowa. On display in booth # 540 will be Fairbanks' FB2560 and FB7100 Instruments with 1605T Remote Display, the new FB1200 Instrument, as well as the Perten AM 5200-A Moisture Meter.

The FB2560 is the latest weighing instrument in the FB2550 family. It maintains an industry leading feature set, such as three different enclosure types and several fieldbus interfaces for system integration, all while incorporating faster processing power, an updated operating system, and more memory. It will satisfy most industrial weighing application needs and is a good choice for batching and filling operations. It can also be operated wirelessly when used with optional accessories. Up to five FB2560 instruments can be networked, sharing transactional data and traffic light controls from up to eight scale platforms. When paired with the 1605T Remote Display, the FB 2560 instrument is ideal for agricultural applications, such as batching in fertilizer and feed.

The FB7100 Series instruments, perfect for a wide variety of general, single-scale operations will be showcased at the show. Scale operators will save time and increase productivity thanks to the FB7100's lightning-fast functionality, touchscreen interface, standard remote scale configuration, calibration and 24/7 diagnostics (via any web browser).

The new FB1200 Industrial Scale Instrument, designed for basic applications using analog bench scales, floor scales, tank assemblies, or livestock scales will also be featured at the show. The instrument uses the livestock filter to calculate the weight of a single animal or a group. It also holds the highest stable or unstable weight, even when the weight is removed, perfect for agricultural use.

Perten Instruments analytical products, ideal for use in monitoring quality, meeting specifications, and setting commodity pricing, will also be promoted at the show. Perten Instruments products are an excellent choice for such industry segments as biofuels, grain farmers and traders, oilseed processors, flour milling, and wet and dry corn processing.

The Perten AM 5200-A Moisture Meter to be featured is the most accurate and repeatable moisture meter available. Ideal for analyzing grains, oilseeds, pulses, beans, lentils, and seeds for moisture, test weight, and temperature, the AM 5200-A can be used as a stand-alone moisture meter at terminals or can be integrated into automated testing systems.
